### References

A summary of selected references is provided at the end of the document. These references are cited throughout the text to support the information presented. The references list includes a variety of sources, such as scientific articles, books, and reports, covering a range of topics related to geology, paleontology, and environmental science. The references are organized alphabetically by author names and are formatted to follow the standard citation styles used in academic writing.

---

### Map Symbols

The map symbols used in the text are shown in a legend located at the bottom of the page. These symbols are color-coded and represent different geological features such as faults, faults blocks, and geologic formations. The legend provides a key to interpreting the map symbols and aids in understanding the geological relationships depicted in the maps.

---

### Additional Information

For a more detailed understanding of the geological concepts and processes discussed in the text, readers are encouraged to consult the references provided at the end. These resources offer in-depth analysis and further exploration of the topics covered, including the historical and environmental context of the regions and formations mentioned. The maps and references are integral to gaining a comprehensive understanding of the geological landscape and its evolution over time.
