UTAH GEOLOGICAL SURVEY

The **UTAH GEOLOGICAL SURVEY** is organized into five geologic programs with Administration, Editorial, and Computer Resources providing necessary support to the programs. The **ECONOMIC GEOLOGY PROGRAM** undertakes studies to identify coal, geothermal, uranium, hydrocarbon, and industrial and metallic resources; initiates detailed studies of these resources including mining district and field studies; develops computerized resource data bases, to answer state, federal, and industry requests for information; and encourages the prudent development of Utah's geologic resources. The **APPLIED GEOLOGY PROGRAM** responds to requests from local and state governmental entities for engineering-geologic and ground-water investigations; and identifies, documents, and interprets Utah's geologic hazards and ground-water resources. The **GEOLOGIC MAPPING PROGRAM** maps the bedrock and surficial geology of the state at a regional scale by county and at a more detailed scale by quadrangle. The **GEOLOGIC EXTENSION SERVICE** answers inquiries from the public and provides information about Utah's geology in a non-technical format. The **PALEONTOLOGY AND PALEOECOLOGY PROGRAM** maintains and publishes records of Utah's fossil resources, provides paleontological recovery services to state and local governments, and conducts studies of environmental change to aid resource management.

The UGS Library is open to the public and contains many reference works on Utah geology and many unpublished documents on aspects of Utah geology by UGS staff and others. The UGS has several computer data bases with information on mineral and energy resources, geologic hazards, stratigraphic sections, and bibliographic references. Most files may be viewed by using the UGS Library. The UGS also manages a sample library which contains core, cuttings, and soil samples from mineral and petroleum drill holes and engineering geology investigations. Samples may be viewed at the Sample Library or requested as a loan for outside study.

The UGS publishes the results of its investigations in the form of maps, reports, and compilations of data that are accessible to the public. For information on UGS publications, contact the Sales Office, 2363 South Foothill Drive, Salt Lake City, Utah 84109-1491, (801) 467-0401.

The Utah Department of Natural Resources receives federal aid and prohibits discrimination on the basis of race, color, sex, age, national origin, or disability. For information or complaints regarding discrimination, contact Executive Director, Utah Department of Natural Resources, 1594 West North Temple #3710, Box 145610, Salt Lake City, UT 84116-5610 or Equal Employment Opportunity Commission, 1801 L Street, NW, Washington DC 20507.

INTRODUCTION

Sample Library Mission

The mission of the Utah Geological Survey (UGS) Sample Library is to provide a public facility for preserving and studying geological samples and associated data collected in Utah. The Sample Library provides a repository for core and cuttings that might otherwise be discarded due to industry and government budget constraints and reorganizations. The Sample Library makes this valuable resource available at minimal charge to researchers from industry, universities, government, and to the general public.

Sample Library History

The Sample Library was established in 1951 in the basement of the Mines Building on the University of Utah campus in Salt Lake City. Since then the collection has grown substantially and been relocated several times. It presently occupies an 11,800-square-foot warehouse at 4060 South 500 West in Salt Lake City. The collection consists of cuttings from more than 3,000 drill holes, core samples from more than 300 drill holes, representative oil samples from all producing formations in the state, representative coal samples from producing coal mines, and miscellaneous metallic mineral, industrial rock and mineral, tar sand, oil shale, geothermal well, and surface stratigraphic section samples.

SERVICES AVAILABLE

The Sample Library is a clean, heated, well-lit research facility that includes office facilities and is staffed by two full-time employees. An examination area is available to layout a large number of samples on tables. The area is suitable for group core workshops or classes. Sample preparation and examination equipment available include: a core saw, a binocular microscope, a UV binocular microscope, and hand tools and reagents. Library personnel can also provide high quality photographs of geologic samples in the Library.

Library samples can be loaned for examination at other facilities. Samples can be delivered by Library personnel or shipped. The Library lending policy is:

- (1) Shipping or delivery costs are billed to the borrower.
- (2) The normal lending period is six months with possible extensions.
- (3) Destructive testing of samples requires prior approval from the UGS Economic Geology Program Manager. Results of destructive testing must be forwarded to the UGS for release to the public domain after an agreed upon period of confidentiality.

The UGS charges moderate fees for use of samples and Library facilities; contact Library personnel for information on current charges.

ACQUISITION OF NEW SAMPLES

The UGS gladly accepts new geological samples, under the following conditions:

- (1) Donated material becomes the property of the Utah Geological Survey and may be destructively analyzed, skeletonized, or in rare cases discarded.
- (2) Donated material is available for public inspection and loan; however, an initial period of confidentiality up to 12 months can be stipulated by the donor.
- (3) Samples must have adequate location information attached. Additional information such as geophysical logs, core descriptions, and test results is welcome but not required.

CATALOG ORGANIZATION

The catalog is subdivided into a master list (in ASCII-format files on the diskette in the pocket) and a series of indexes (Appendices A to D) to the information in the master list. The master list contains information on all inventoried samples in the Sample Library. The master list is contained in self-extracting file SAMLIB.EXE which when executed will install files SAMLIB.TXT and SAMLOC.TXT on a computer hard disk. To execute SAMLIB.EXE, copy SAMLIB.EXE to a temporary directory and either type the filename at the DOS prompt, or enter the filename using the Run menu option in the Windows Program Manager, or double-click the filename in the File Manager. The self-extracting file will create a directory called "SAMLIB" and extract to that directory the files SAMLIB.TXT and SAMLOC.TXT.

Appendix A is a one-line-per-record index to the master list sorted alphabetically by oil and gas field or area name and then alphanumerically by township, range, and section. Wells not assigned to any field or area name appear first in the list. Appendix B is a one-line-per-record index of just core samples, sorted alphanumerically by township, range, and section. Appendix C is a one-line-per-record index sorted alphabetically by county name and then alphanumerically by township, range, and section. Appendix D is a one-line-per-record index sorted alphabetically by operator of the well and then alphanumerically by township, range, and section.

DIGITAL DATA SOURCE, ORGANIZATION, AND ACCURACY

The two ASCII-delimited data files that together comprise the master list are:

1. SAMLOC.TXT which contains well location data for the 4,522 wells in this catalog and,
2. SAMLIB.TXT which contains available data from UGS Sample Library for 3,129 of the wells listed in SAMLOC.TXT.

To create the two ASCII-delimited files, the data were extracted from a larger, integrated Utah Geological Survey (UGS) relational database application developed under the working

name of INTEGRAL*gim. Each ASCII-delimited file was derived from a table in INTEGRAL*GIM. The data in each INTEGRAL*gim table are linked by the API number. Most of the well location data in INTEGRAL.gim were originally obtained from the digital well files of the Utah Division of Oil, Gas and Mining (DOGGM). All other data were obtained from files at UGS.

The user should be aware that the API number for some records is an “API-style” number assigned by the UGS rather than an official API number. The “API-style” numbers are obvious because they include letters in the four-digit part of the code and/or have a five-digit part of the code > 49,999. These records are most likely surface, mine, or geologic engineering samples, which are not assigned an API number by DOGM. In addition, some wells were flagged during the import procedure into INTEGRAL*gim from the DOGM data files; these wells may represent duplicate, deepened, or reentered wells. Although an effort was made to resolve the status of these wells some uncertainty remains; thus, “API-style” numbers were assigned to some of these wells so they could be retained for future database editing.

An ASCII-delimited file format was used to make it easier for users to import these data into a database manager or spreadsheet program. The files contain one data record per line of text. The different data fields for each record are separated from each other with a special ASCII symbol, the piping character (|). The first row of each ASCII-delimited file lists the field names for that file. Tables 1 and 2 contain the name of the original INTEGRAL*gim table, the number of records and fields in the file, the data structure, and the data field descriptions for each respective ASCII-delimited file.

Table 1. Data structure of the SAMLOC.TXT ASCII file.

Row	Field Name	Field Type	Size	Description	Key Field
Table Name = UWASCL					
Number of Records = 4,522					
Number of Fields = 49					
1	API #	Text	18	API Number	Yes
2	Operator	Text	30	Operator or Project Name	
3	WName	Text	30	Well or Section	
4	Well #	Text	15	Well or Section Number	
5	KBelev	Number (Double)	8	Surface Elevation	
6	ElDatum	Text	2	Datum from which Surface Elevation was Measured	
7	SLNum	Number (Integer)	2	Sample Library Number	
8	CLNum	Number (Integer)	2	Core Library Number	
9	County	Text	10	County Name	
10	State	Text	2	State Name	
11	Township	Number (Double)	8	Township	
12	N/S	Text	1	North-South Indicator	
13	Range	Number (Double)	8	Range	
14	E/W	Text	1	East-West Indicator	
15	Section	Number (Integer)	2	Section Number	
16	Qtr Sec	Text	6	Quarter Section	
17	FNSLdistance	Number (Double)	8	Distance from North or South Section Line	

18	FNSLdirection	Text	1	North-South Indicator
19	FEWLdistance	Number (Double)	8	Distance from East or West Section Line
20	FEWLdirection	Text	1	East-West Indicator
21	Field/Area	Text	27	Name of Petroleum Field, Mine, etc.
22	TD	Number (Double)	8	Total Depth of well
23	FmAtTD	Text	15	Geologic Formation at Total Depth
24	Purpose	Text	16	Purpose of Operation
25	Basin	Text	10	Basin Name
26	Meridian	Text	4	Meridian Name
27	ElDate	Date/Time	8	Date Record was Entered
28	MIDate	Date/Time	8	Date Record Location was Modified
29	ProdZone	Text	5	Name of Producing Formation
30	WellStatus	Text	3	Status of Well or Operation
31	WellType	Text	20	Type of Well or Operation
32	SpudDate	Date/Time	8	Starting Date of Operation
33	CompDate	Date/Time	8	Completion Date of Operation
34	CurOperator	Text	30	Name of Current Operator
35	LocUnits	Text	2	Unit of Distance (English or Metric)
36	ModAgeRel	Date/Time	8	Modification Date of Records in the Age Table
37	ModCoal	Date/Time	8	Modification Date of Records in the Coal Table
38	ModCoreAnl	Date/Time	8	Modification Date of Records in the Core Analysis Table
39	ModCplTest	Date/Time	8	Modification Date of Records in the Completion Test Table
40	ModFmDST	Date/Time	8	Modification Date of Records in the Drill Stem Test Table
41	ModFmtops	Date/Time	8	Modification Date of Records in the Formation Top Table
42	ModGasChem	Date/Time	8	Modification Date of Records in the Gas Chemistry Table
43	ModGeothermal	Date/Time	8	Modification Date of Records in the Geothermal Table
44	ModLithols	Date/Time	8	Modification Date of Records in the Lithology Description Table
45	ModLogLib	Date/Time	8	Modification Date of Records in the Geophysical Log Table
46	ModOilChem	Date/Time	8	Modification Date of Records in the Oil Chemistry Table
47	ModPcurent	Date/Time	8	Modification Date of Records in the Paleocurrent Table
48	ModProduct	Date/Time	8	Modification Date of Records in the Production Table
49	ModSamLib	Date/Time	8	Modification Date of Records in the Core Library Table

Table 2. Data structure of the SAMLIB.TXT ASCII file.

Row	Field Name	Field Type	Size	Description	Key Field
				Table Name = USAMLIB Number of Records = 3,129 Number of Fields = 6	
1	API #	Text	18	API Number	Yes
2	Sample Type	Text	20	Sample Type (Core, Cuttings, etc.)	Yes
3	TopFootageSam	Number (Integer)	2	Top of Sample Interval	Yes
4	BottomFootageSam	Number (Integer)	2	Bottom of Sample Interval	Yes
5	ID	Text	5	Sample Type Abbreviation	
6	Remarks	Memo		Miscellaneous information. The longest character string currently in this field is less than 255 characters.	

Despite extensive editing, the data in this publication is still incomplete and occasionally inaccurate and is only intended to inform UGS customers about geologic samples available from the UGS Sample Library. UGS does not guarantee the accuracy of data in the report and is not responsible for actions taken by the user based on the data. UGS also does not guarantee proper execution of the self-extracting files on all computer systems. Use of trade names does not imply endorsement by the UGS. The use of all or part of this digital data from this publication should be cited. The UGS Sample Librarian would appreciate receiving information from readers on errors they discover in this catalog.

ACKNOWLEDGMENTS

This catalog is the result of the efforts of many people over a long period of time who collected information on donated material, input that data into a database, and edited the data. They include: Howard Ritzma, Craig Horne, Craig Dixon, Karl Brown, Karen Chase, Jordeane Dent, Mike Laine, Carolyn Olsen, Cynthia Brandt, Bob Gloyn, and Dar Day. Michele Hoskins, Kimberley Waite, Sharon Wakefield, Doug Sprinkel, and Bryce Tripp helped compile and edit the final product. Bob Gloyn and Craig Morgan reviewed the draft catalog. Doug Sprinkel helped design the Sample Library database and provided data processing support. The Utah Division of Oil, Gas and Mining downloaded well location records from their database in a format suitable for uploading into the database manager used in this compilation.
