MINES AND PROSPECTS CONTAINING GOLD IN UTAH

by

Michael A. Shubat, Bryce T. Tripp,
Charles E. Bishop, and Robert E. Blackett
Utah Geological and Mineral Survey

OPEN-FILE REPORT 207 FEBRUARY 1991
UTAH GEOLOGICAL AND MINERAL SURVEY
a division of
UTAH DEPARTMENT OF NATURAL RESOURCES

This open-file release makes information available to the public which will not appear in another published form but is considered to be of value. It may not necessarily conform to formal UGMS policy, technical review, or editorial standards, and therefore it may be premature for an individual or group to take action based on the contents of this report.

DISCLAIMER

This report is preliminary and has not been reviewed for conformity with UGMS policy, technical, or editorial standards. Data presented in this report have been extracted from the Utah Mineral Occurrence Data System (UMOS), available for inspection at the UGMS, except where otherwise noted. No guarantees are made as to the accuracy of the data. If errors or omissions have been made in this report, please direct your comments to the senior author. Any corrections would be greatly appreciated.

INTRODUCTION

This report contains information on 730 inactive mines and prospects in the state that produced or contain gold as a major (primary) or minor (by-product) commodity. In addition, locations and production and reserve data are shown for the six active (or recently active) gold-producing mines in the state. Locations of mines and prospects are shown on two state-wide maps, plates 1 and 2. Plate 1 shows the locations of active gold-producing mines and the locations of inactive mines and prospects that produced or contain gold as the primary commodity. Index numbers shown on plate 1 correspond to indexed entries in table 1. Table 1 lists data for the inactive mines and prospects containing gold as the primary commodity and includes the name of

the mine or prospect, commodities present, the size of the mine or prospect, and any known production data. The commodities listed for each mine or prospect are (approximately) in order of decreasing value from left to right. Commodity abbreviations are identical to the standard elemental symbols used in chemistry, with the exception of Cly (clay). Size designations are medium (M) for mines that produced over 100,000 oz gold, small (S) for mines that produced less than 100,000 oz gold, nonproducing (N) for prospects that did not produce gold, and unknown (U) for prospects for which production data are unavailable. There are no large (greater than 1,000,000 oz gold), inactive mines in the state that produced gold as the primary commodity.

Plate 2 shows the locations of inactive mines and prospects that contain or produced gold as a by-product commodity. Index numbers shown on plate 2 correspond to indexed entries in table 2. Table 2 lists data for each site shown on plate 2 and includes the name of the mine or prospect, commodities present, the size of the mine or prospect, and any known production data. The commodities listed for each mine or prospect are (approximately) in order of decreasing value from left to right. Arbitrary size designations are large (L), medium (M), small (S), nonproducing (N) for prospects that did not produce ore, and unknown (U) for prospects for which production data are unavailable.

Table 3 lists data for the six active gold-producing mines in the state (plate 1). It includes a list of commodities

produced, size of the mine, production and reserves, years during which the mine produced, and the county. Data for the Bingham Canyon and Mercur mines are from Stein and others (1989). Data for the Barneys Canyon mine (including the Melco deposit) are from Gunter and others (1990). Data for the Goldstrike mine are from Hebert (1990). Data for the Drum Mine are from Nutt and others (1990; production data only). The Drum mine is currently inactive (leaching operations ended in July, 1990). Data for the Trixie Mine are from Glen Mellor, senior geologist, Sunshine Mining Company (written communication, 1991; production data only).

Plate 1. Active gold-producing mines in Utah and inactive mines and prospects containing gold as the primary commodity.

- Active (or recently active) gold-producing mine
- Small-sized gold producer (less than 100,000 oz gold)
- Medium-sized gold producer (greater than 100,000 oz gold)
- Nonproducing gold prospect
